KEYWORDS Homo sapiens mRNA; cDNA AL834478 AL834478.1 GI:21740252 Homo sapiens (human) 2938 bp mRNA linear PRI 12-JUL-2002 DKFZp762L1111 (from clone DKFZp762L1111).

Bukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

CE 1 (bases 1 to 2938)

Blum, H., Bauersachs, S., Mewes, H.W., Weil, B. and Wiemann, S. Direct Submission

Submitted (09-JUL-2002) 1, D-85764 Neuherberg, GERMANY

Clone from S. Wiemann, Molecular Genome Analysis, German Cancer Research Center (DKFZ); Email s. Wiemann@dkfz-heidelberg.de; sequenced by LMU (Ludwig Maximilians University, Munich/Germany) within the cDNA sequencing consortium of the German Genome Project.

This clone (DKFZ)76ZL1111) is available at the RZPD in Berlin.

Please contact the RZPD: Ressourcenzentrum, Heubnerweg 6, 14059

Berlin-Charlottenburg, GERMANY; Email: clone@rzpd.de Further information about the clone and the sequencing project is available

On Aug 1, 2001 this sequence version replaced gi:15021177.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one M13 subclone; and the
assembly was confirmed by restriction digest. The following
abbreviations are used to associate primary accession numbers given
in the feature table with their source databases: Em:, EMBL; Sw:,
SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        IMPORTANT: This sequence is not the entire insert of clone RRP11-53A21 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap.
The true right end of clone RP11-553A21 is at 163577 in this sequence. The true left end of clone RP11-525G3 is at 88067 is sequence. The true right end of clone RP3-397H23 is at 2000 is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr6 RP11-553A21 is from the library RPCI-11.2 constructed by the of Pieter de Jong. For further details see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Eukaryota; Metazoa; Chordata; Mammalia; Eutheria; Primates; 1 (bases 1 to 163577)

The invention is used for negatively modulating TGF-bete activity, and thus for treating conditions characterised by overproduction of TGF-beta, such as cancer. Antisense molecules of the invention are used for increasing TGF-beta availability and increase graft success. The present sequence is a gene encoding human r150 profess.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel transforming growth factor (TGF)-beta 1 binding reagent which comprises r150 protein which acts as accessory receptor of TGF-beta useful for negatively modulating TGF-beta activity, and thus for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                and increase graft human r150 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (UYMC-)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC polypeptides. These nucleic acid molecules include the human cDNA CS sequences comprising CD109 K1, CD109 K1-17, CD109 K15 or their variants. CC CD109 is a novel member of the alpha2 macroglobulin (alpha2M)/C3, C4, C5 CG family of thioester-containing proteins. The CD109 polypeptides can be CC expressed by standard recombinant methodology. The CD109 nucleic acid, CC CD109 polypeptide or its mimetic, or the anti-CD109 antibody is useful CG for treating or detecting a disease or disorder, e.g. conditions CC associated with endothelial activation, platelet activation, activation of the coagulation or fibrinolytic systems, activation of T lymphocytes and of the complement system, quantitative or qualitative abnormalities CC activation, increased or impaired or impaired platelet aggregation and CC activation, increased or impaired activation or the coagulation and or correct or also useful for treating cardiovascular disorders, stroke, myocardial infarction, thrombosis, embolism, peripheral vascular disease, CC infarction, thrombosis, embolism, peripheral vascular disease, organ CC transplantation, or bone marrow transplantation. The CD109 nucleic acids or their antisense nucleotide sequence are useful in gene therapy for CC treating these conditions. The present sequence represents the human consider conditions. The present sequence represents the human consider the present sequence represents the human consider the present sequence represents the human considered to the present sequence represents the human considered conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches 4286;

Novel transforming growth factor (TGF)-beta 1 binding reagent which comprises r150 protein which acts as accessory receptor of TGF-beta useful for negatively modulating TGF-beta activity, and thus for treating cancer

Disclosure; Fig 17; 127pp; English.

The invention relates to novel transforming growth factor (TGF)-betal binding reagent which comprises a glycosylphosphatidyl inositol (GPI)-anchored TGF-betal binding protein referred to as r150 which acts as an accessory receptor of TGF-beta. The invention is used for negatively modulating TGF-beta activity, and thus for treating conditions characterised by overproduction of TGF-beta, such as cancer. Antisense molecules of the invention are used for increasing TGF-beta availability

The present sequence is human blood cell surface antigen, CD109 encoding DNA. CD109 is a variant of r150 sequence. Note: This sequence is stated to encode human CD109 protein shown in figure 17 of the specification, but this does not appear to be the case.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           В
            The invention relates to isolated nucleic acid molecules encoding CD109
C polypeptides. These nucleic acid molecules include the human cDNA
C sequences comprising CD109 K1, CD109 K1-H7, CD109 K15 or their variants.
CC CD109 is a novel member of the alpha2 macroglobulin (alpha2M)/C3, C4, C5
CE family of thioester-containing proteins. The CD109 polypeptides can be
cexpressed by standard recombinant methodology. The CD109 mucleic acid,
CC CD109 polypeptide or its minetic, or the anti-CD109 antibody is useful
CC for treating or detecting a disease or disorder, e.g. conditions
CC associated with endothelial activation, platelet activation, activation
CC of the complement system, quantitative or qualitative abnormalities
CC and of the complement system, quantitative or qualitative abnormalities
CC of platelet function, increased or impaired platelet aggregation and/or
CC fibrinolytic systems, or impaired activation of the coagulation and/or
CC fibrinolytic systems, or impaired or increased immune activation. These
CC are also useful for treating cardiovascular disorders, stroke, myocardial
CC infarction, thrombosis, embolism, peripheral vascular disease, organic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CD109; alpha2 macroglobulin; thioester; cerebroprotective; c: immunosuppressive; haemostatic; anticoagulant; thrombolytic; cardiovascular; vasotropic; gene therapy; CD109 KI-H7; gene;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New CD109 nucleic acids and polypeptides, useful in gene therapy, particularly for treating strokes, myocardial infarctions, thrombosis, thrombocytopenia, autoimmune diseases, or organ or bone marrow
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ABQ79966

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                   The invention relates to novel transforming growth factor (TGF)-betal binding reagent which comprises a glycosylphosphatidyl inositol (GPI)-anchored TGF-betal binding protein referred to as r150 which acts as an accessory receptor of TGF-beta. The invention is used for negatively modulating TGF-beta activity, and thus for treating conditions characterised by overproduction of TGF-beta, such as cancer. Antisense molecules of the invention are used for increasing TGF-beta availability and increase graft success. The present sequence is human r150 protein encoding DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                              Novel transforming growth factor (TGF)-beta 1 binding reagent which comprises r150 protein which acts as accessory receptor of TGF-beta, useful for negatively modulating TGF-beta activity, and thus for

                                                                                                                                  The invention relates to isolated nucleic acid molecules encoding CD109 CC polypeptides. These nucleic acid molecules include the human cDNA CC sequences comprising CD109 K1, CD109 K1-H7, CD109 K15 or their variants. CC CD109 is a novel member of the alpha2 macroglobulin (alpha2M)/C3, C4, C5 CC family of thioester-containing proteins. The CD109 polypeptides can be CC expressed by standard recombinant methodology. The CD109 nucleic acid, CC CD109 polypeptide or its mimetic, or the anti-CD109 antibody is useful CC associated with endothelial activation, platelet activation, activation of the complement system, quantitative or qualitative abnormalities CC associated with endothelial activation of platelet aggregation and cf the complement system, quantitative or qualitative abnormalities CC and of the complement system, quantitative or qualitative abnormalities CC inflation, increased or impaired activation of Tlymphocytes CC are also useful for treating cardiovascular disorders, stroke, myocardial CC inflation, thrombosis, embolism, peripheral vascular disease, CC are also useful for treating cardiovascular disorders, stroke, myocardial CC inflation, or bone marrow transplantation. The CD109 mucleic acids CC or their antisense nucleotide sequence are useful in gene therapy for CC transplantation, or bone marrow transplantation. The CD109 mucleic acids CC or their antisense nucleotide sequence are useful in gene therapy for CC cutos CC or the present sequence represents the human CC cd or the complaint cDNA sequence.

The invention relates to isolated nucleic acid molecules encoding CD109 CD polypeptides. These nucleic acid molecules include the human cDNA CD sequences comprising CD109 K1, CD109 K1-H7, CD109 K15 or their variants. CC CD109 is a novel member of the alpha2 macroglobulin (alpha2M)/C3, C4, C5 family of thioester-containing proteins The CD109 polypeptides can be expressed by standard recombinant methodology. The CD109 nucleic acid, CC CD109 polypeptide or its minetic, or the anti-CD109 antibody is useful CC associated with endothelial activation, platelet activation, activation of the coagulation or fibrinolytic systems, activation of Tlymphocytes and of the complement system, quantitative or qualitative abnormalities CC associated tinuction, increased or impaired activation of Tlymphocytes activation, increased or impaired platelet aggregation and CC of platelet function, increased or impaired application and contivation of the coagulation and contivation contivation continued association. These care also useful for treating cardiovascular disease, myocardial continued c or their antisense nucleotide sequence treating these conditions. The present CD109 K1-H7 variant cDNA sequence. are useful in gene therapy for sequence represents the human

                                                                                                                                                             The present invention relates to a sequence capable off binding specifically to a CD109 nucleic acid which has a single nucleotide polymorphism that distinguishes the Gova and Govb alleles. Detection of the Gov genotype is useful for detecting whether the subject has or is at risk of a blood disease, disorder or abnormal physical state, such as bleeding, or increased risk of bleeding, due to alloimmune destruction of blood platelets, e.g., post-transfusion purpura, post-transfusion platelet refractoriness or neonatal alloimmune thrombocytopenia. The nucleic acid and polypeptide are useful for Gov genotyping or phenotyping individuals. The present sequence is the Gova coding sequence.
                                                                                                                                                                                                                                                                                                                                          New isolated oligonucleotide binding to a region of CD109 nucleic acid having a single nucleotide polymorphism that distinguishes a Gova and/or Govb allele, useful for treating blood disorders e.g. alloimmune

                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to a sequence capable off binding specifically to a CD109 nucleic acid which has a single nucleotide polymorphism that distinguishes the Gova and Govb alleles. Detection of the Gov genotype is useful for detecting whether the subject has or is at risk of a blood disease, disorder or abnormal physical state, such as bleeding, or increased risk of bleeding, due to alloimmune destruction of blood platelets, e.g., post-transfusion purpura, post-transfusion platelet refractoriness or neonatal alloimmune thrombocytopenia. The nucleic acid and polypeptide are useful for Gov genotyping or phenotyping individuals. The present sequence is the Govb coding sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated oligonucleotide binding to a region of CD109 nucleic acid having a single nucleotide polymorphism that distinguishes a Gova and/or Govb allele, useful for treating blood disorders e.g. alloimmune thrombocytopenia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; platelet alloantigen; Gova; Govb; single nucleotide polymorphism; SNP; biallelic; bleeding disorder; post-transfusion purpura; post-transfusion platelet refractoriness; haemostatic; vaccine;

                                                                                                                                                                                                                                                                                                         secretory proteins play important roles in the proliferation control, the differentiation induction, the material transport and the biophylaxis of cells. Membrane proteins have important roles as signal receptors, ion channels and transporters. The present sequence is the coding sequence for a human protein which has at least one hydrophobic domain. The protein encoded by the present sequence may be a secretory or a membrane protein. The encoded protein may have cytokine and cell proliferation/differentiation activity, immune stimulating or suppressing activity, haematopoiesis activity, tissue growth activity, haematopoiesis activity, tissue growth activity, haematopoiesis activity, activity and thrombolytic activity, anti-inflammatory activity and tumour inhibition activity. The present sequence could therefore be used for treatment of autoimmune disease, Alzheimer's disease, Parkinson's disease, and cancer via gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI; 200

CC differentiation induction, the material transport and the biophylaxis of CC cells. Membrane proteins have important roles as signal receptors, ion CC channels and transporters. The present sequence is the coding sequence CC protein encoded by the present sequence may be a secretory or a membrane CC protein. The encoded protein may have cytokine and cell CC proteiration/differentiation activity, immune stimulating or suppressing CC activity, haematopoiesis activity, tissue growth activity, haemostatic CC activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic CC and thrombolytic activity, anti-inflammatory activity and tumour CC inhibition activity. The present sequence could therefore be used for treatment of autoimmune disease, Alzheimer's disease, Parkinson's CC disease, and cancer via gene therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to novel transforming growth factor (TGF)-betal binding reagent which comprises a glycosylphosphatidyl inositol (GPI)-anchored TGF-betal binding protein referred to as r150 which acts as an accessory receptor of TGF-beta. The invention is used for negatively modulating TGF-beta activity, and thus for treating conditions characterised by overproduction of TGF-beta, such as cancer. Antisense molecules of the invention are used for increasing TGF-beta availability and increase graft success. The present sequence is human blood cell surface antigen, CD109 encoding DNA. CD109 is a variant of r150 sequence.
